Maranda Roth, NYSDOT

Summary

This report includes AADT (Annual Average Daily Traffic) traffic count information for the state, county and local roads in Tompkins County for which traffic count data was obtained in the year 2023.

Data Description

Traffic count data for 43 State, 43 County, and 64 local road segments (totaling 150) are included in this report. All 150 counts were taken by the New York State Department of Transportation (NYSDOT). The traffic counts in this report represent the combined total of all lanes of traffic on each road. Therefore, both directions of travel are combined on two-way roads.

There are four traffic count tables in this report. All four traffic count tables present the same data, each sorting the data differently. In the first table (pages 7 - 10), the data is sorted in alphabetical order by count location (road name). In the second table (pages 11 - 14), the data is categorized in numerical order by road number. In the third table (pages 15 - 18), the data is sorted in alphabetical order by municipality name. In the fourth table (pages 19 - 22), the data is sorted in numerical order by count station number with the local roads first, followed by the County roads, followed by the State roads.

The report includes the following data (column header descriptions are shown in **bold**):

Station:

The number of the Traffic Count Station where the count was measured. The State station numbers are the last 4 digits as shown on the actual traffic count.

Road #:

County roads are listed with the County Route (CR) number as a prefix. State roads are listed with the State Highway (NY) number as a prefix. Local roads are listed with their Local Highway Inventory (LHI) designated road number.

Count Location:

The name of the road where the traffic count was measured.

Muni:

The city, village or town where the count was measured. The prefix “C/”, “V/” or “T/”, indicates city, village or town, respectively.

FROM / TO:

A description of the road segment's beginning and end describing where the count was measured.

Year:

The year when the traffic count was measured.

Source:

The name of the organization performing the count.

AADT:

The annual average daily traffic (AADT) is the number of vehicles that would be assumed counted on a "typical" day of the year. Based on established formulas, a measured traffic count is factored to an AADT by adjusting it for seasonality and vehicle classifications. Adjusting for seasonality is necessary because each season undergoes an increase or decrease in traffic volumes. Counts are adjusted for vehicle classifications since trucks with three or more axles appear as several cars to the counters.

Last Ct:

The AADT of the most recent count taken on the same road segment location.

Year:

The year of the most recent count taken on the same road segment location.

%Chg:

The % increase or decrease in AADT when comparing the current count to the most recent count taken on the same road segment location.

1st Ct:

The AADT of the earliest count taken on the same road segment location.

Year:

The year of the earliest count taken on the same road segment location.

%Chg:

The % increase or decrease in AADT when comparing the current count to the earliest count taken on the same road segment location.
