

SUMMARY REPORT
HIGH-CRASH ROAD SEGMENTS
AND INTERSECTIONS
IN TOMPKINS COUNTY, NY
2018-2022

December 4, 2023

(Revised March 1, 2024)

Prepared by ITCTC

TABLE OF CONTENTS

Summary	
Data Description	3
Highest Crash Rates in Tompkins County	6
Map: Highest Crash Rates	8
Highest Crash Severity Index in Tompkins County	9
Map: Highest Crash Severity	11
Map: Fatal Crashes	12
Map: Fatal Bicycle and Pedestrian Crashes	13
Highest Number of Crashes	14
Bicycle Crashes in Tompkins County	17
Pedestrian Crashes in Tompkins County	19
Deer Crashes in Tompkins County	21
<u>Crashes Sorted by Town in Tompkins County:</u>	
Town of Caroline Crashes	23
Town of Danby Crashes	26
Town of Dryden Crashes	29
Town of Enfield Crashes	32
Town of Groton Crashes	34
Town of Ithaca Crashes	37
Town of Lansing Crashes	40
Town of Newfield Crashes	43
Town of Ulysses Crashes	46
City of Ithaca Crashes	49

In 2023, the Ithaca-Tompkins County Transportation Council (ITCTC) analyzed vehicle crash data for the 5th time. The vehicle crash data was downloaded for each municipality from the New York State Department of Transportation (NYSDOT)'s ALIS database (Accident Location Information System) for the years 2018 through 2022. This database utilizes all crashes reported to the Department of Motor Vehicles (DMV) by New York State Police, City Police and Municipal Police. **NOTE: this report includes data received from the Cornell Police Department.**

Here is a summary of what we found in the **2018-2022** data:

- There were **14,246** vehicle crashes in Tompkins County on road segment locations and at intersections in the years 2018-2022 – **33.6%** of these crashes occurred in the **City of Ithaca**.
- **18.5%** of all crashes involved **deer**.
- There were **26** fatal crashes in Tompkins County. **4** (15.4%) occurred in each of the Towns of Lansing, Dryden, Ithaca, and Ulysses; **3** (11.5%) occurred in the Town of Enfield; **2** (7.7%) occurred in each of the Towns of Caroline and Groton; and **1** (3.8%) occurred in the City of Ithaca and in each of the Towns of Newfield and Danby. **11** (42.3%) of the fatal crashes took place on NY State Highways.
- Included in the 26 crash **fatalities** were **7 pedestrians** (26.9%) and **3 bicyclists** (11.5%).
- There were **422** crashes resulting in **serious injuries** (3.0%) [NOTE: a “Serious Injury” is defined by NYSDOT as an injury (other than fatal) which results in one or more of the following: (1) severe laceration resulting in exposure of underlying tissues/muscle/organs, (2) broken or distorted extremity (arm or leg), (3) crush injuries, (4) suspected skull, chest, or abdominal injury, (5) significant burns (2nd or 3rd degree), (6) unconsciousness, and/or (7) paralysis].

The methodology used by the Mid-Ohio Regional Planning Commission (MORPC) was used as a guide in the analysis. The formulas used by MORPC were developed in coordination with local transportation engineers and planners in their region, as well Ohio Department of Transportation representatives. The following steps were used in the analysis:

Road Segments:

- ITCTC aggregated all crashes on **road segments** throughout Tompkins County. Any accidents within 250' of intersections were excluded here.
- Only road segments that showed at least 5 crashes from 2018 through 2022 (i.e. **1 crash per year**) were included in the next steps of analysis.

- A “Severity Index” was calculated for each road segment. Crashes were weighted according to their severity level, with fatal crashes being the most severe, followed by serious injury crashes, followed by injury crashes, then property-damage only crashes (>\$1,000 of damage).
- Severity Index = (12 * # of fatal crashes) + (9 * # of serious injury crashes) + (3 * # of injury crashes) + (# of property damage only crashes) / total crashes.
- A “Crash Rate” (per million vehicles) was calculated – using the most recent traffic counts from NYSDOT, Tompkins County Highway Department, and other sources.
- Crash Rate = total crashes / ((Daily Traffic Volume) * 5 years * 365 days * road segment length * 0.000001)
- Each Road was sorted by ‘Crash Rate’ and ‘Severity Index’ for each municipality in a table.
- Also ranked were high-crash bicycle locations, high crash pedestrian locations and the high crash deer (deer crashes / total crashes) locations.

* NOTE: a “Serious Injury” is defined by NYSDOT as an injury (other than fatal) which results in one or more of the following: (1) severe laceration resulting in exposure of underlying tissues/muscle/organs, (2) broken or distorted extremity (arm or leg), (3) crush injuries, (4) suspected skull, chest, or abdominal injury, (5) significant burns (2nd or 3rd degree), (6) unconsciousness, and/or (7) paralysis.

Intersections:

- ITCTC aggregated all crashes within 250 feet of each **intersection** throughout Tompkins County. Any accidents not related to intersections were excluded here
- Only intersections that showed at least 5 crashes from 2018 through 2022 (i.e. **1 crash per year**) were included in the next steps of analysis.
- A “Severity Index” was calculated for each intersection. Crashes were weighted according to their severity level, with fatal crashes being the most severe, followed by serious injury crashes, followed by injury crashes, then property-damage only crashes (>\$1,000 of damage).
- Severity Index = (12 * # of fatal crashes) + (9 * # of serious injury crashes) + (3 * # of injury crashes) + (# of property damage only crashes) / total crashes.
- A “Crash Rate” (per million entering vehicles) was calculated for each intersection using the most recent traffic counts from NYSDOT, Tompkins County Highway Department, and other sources.
- Crash Rate = total crashes / ((Daily Traffic Volume) * 5 years * 365 days * 0.000001)

- Each Intersection was sorted by ‘Crash Rate’ and ‘Severity Index’ for each municipality in a table.

* NOTE: a “Serious Injury” is defined by NYSDOT as an injury (other than fatal) which results in one or more of the following: (1) severe laceration resulting in exposure of underlying tissues/muscle/organs, (2) broken or distorted extremity (arm or leg), (3) crush injuries, (4) suspected skull, chest, or abdominal injury, (5) significant burns (2nd or 3rd degree), (6) unconsciousness, and/or (7) paralysis.

Mapping:

- Two maps were generated for the county showing locations of the top 20 ‘Crash Rate’ and ‘Crash Severity’ locations.
- A map was created showing the location of all fatal crashes in Tompkins County.

Data Format:

For Tompkins County only:

- ‘Crash Rate’ tables for both the top 20 road segments and the top 20 intersections
- Map of the top 20 highest-crash rate locations
- Crash ‘Severity Index’ for both the top 20 road segments and the top 20 intersections
- Map of the top 20 highest-crash severity locations
- ‘Highest Bicycle Crash’, ‘Highest Pedestrian Crash’ and ‘Highest Deer Crash’ tables

For each Town and the City of Ithaca:

- ‘Crash Rate’ tables for both the top 10 road segments and the top 10 intersections
- Crash ‘Severity Index’ for both the top 10 road segments and the top 10 intersections

Crashes in TOMPKINS COUNTY

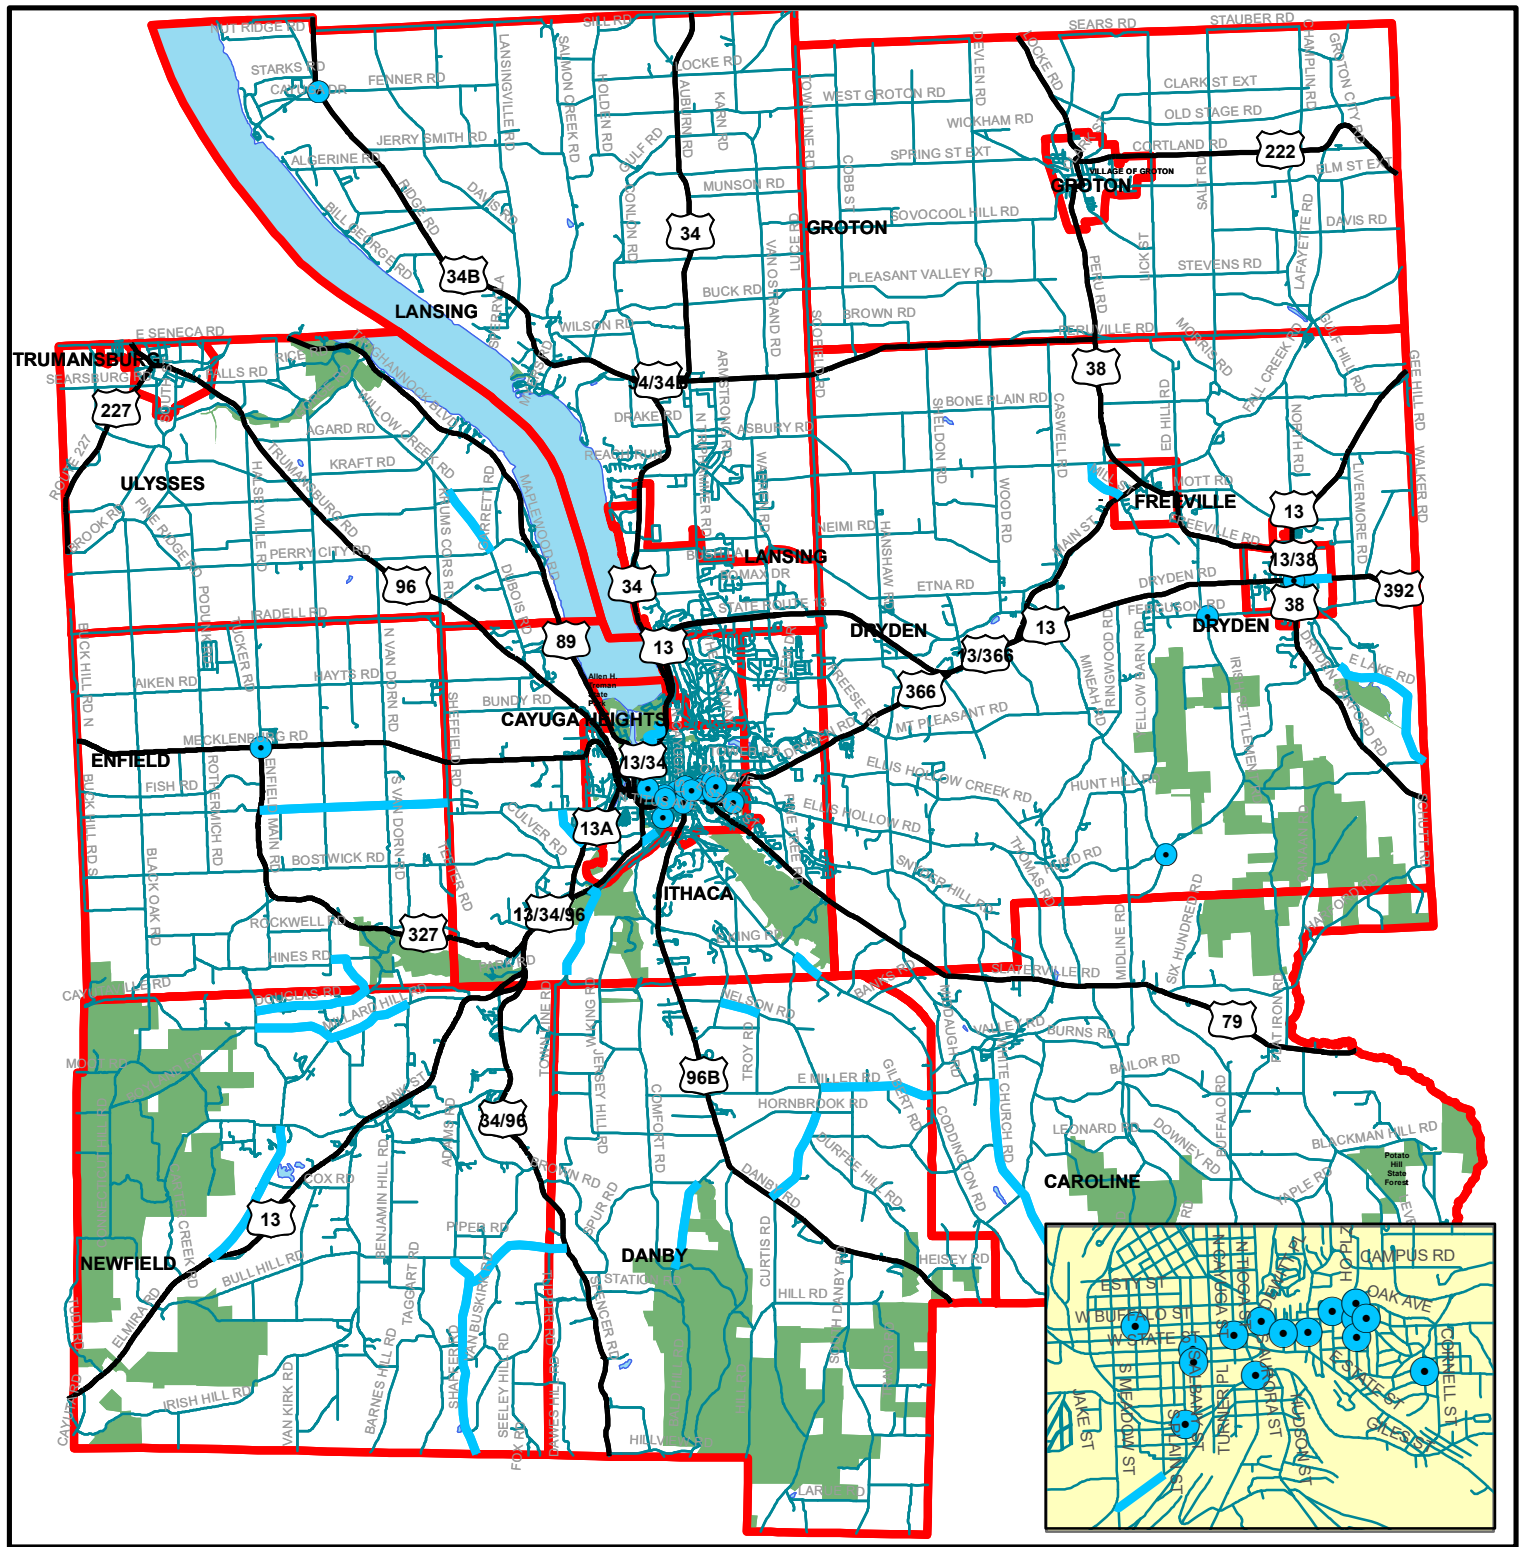

- High-Crash Rate **Tables** for road segments and intersections
- High-Crash Rate **Map**
- High-Crash Severity **Tables** for road segments and intersections
- High-Crash Severity **Map**
- Fatal Crashes **Map**
- Highest Number of Crashes for road segments and intersections

Top 20 - Highest Crash Rate on Road Segments (min 1 crash/year) - Tompkins County - 2018-2022
