# APARTMENT DEMAND ANALYSIS TOMPKINS COUNTY, NEW YORK NOVEMBER 2016

**PROVIDED BY:** 

The Danter Company 2760 Airport Drive Columbus, OH 43219 (614)221-9096

#### **SOURCES AND METHODOLOGY**

The following analysis is based on the Field Survey of Market Rate Apartments conducted by The Danter Company. During the field survey the field analyst interviewed the property manager and/or the property owner to determine the share of units occupied by students. These were then deducted from the overall survey so that only units occupied by non-students remained.

The distribution, by mix and by price, was compared with a "typical" distribution generated by aggregating multiple markets with a full representation of product to create the "ideal" mix and proportionate number of units for a prototypical market such as Tompkins County. Comparison markets were selected based on several factors:

- The overall stability of the market with respect to rent and vacancies. Ideally, vacancies should be evenly distributed by both mix and rent ranges; indicating a well-balanced market. Markets with new product released on a regular basis will reflect current trends in product preference.
- Larger markets usually reflect a better balanced picture of the "ideal" mix due to the
  likelihood of multiple, competitive, developers impacting product. The Danter
  Company utilized their extensive database to reflect the optimum mix on a universal
  basis. Over 200,000 units from Columbus, Ohio; Rochester, New York; Indianapolis,
  Indiana and Lexington, Kentucky were used. Only markets in which The Danter
  Company has a 100% database were used in order to reflect urban suburban
  impact.
- Smaller markets were also aggregated. Because for this analysis, we are considering the demand for non-student housing (student occupied housing has been deleted from the Tompkins County inventory), comparison markets were selected that were not impacted by a large student population. Also, markets were selected that were relatively isolated from major metropolitan areas. They are also markets in which The Danter Company has a recent 100% database. Markets included in this component are:
  - Findlay, OH
  - Rapid City, SD
  - Newark/Heath, OH
  - Mt. Joliet, TN
  - Lima, OH
  - Flagstaff, AZ
  - Manitowoc, WI
  - Troy, OH

A summary of these markets follows in the report.

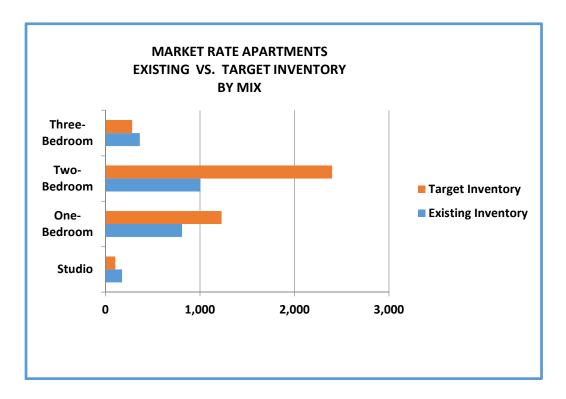

Surpluses and deficits are identified by deducting the prototypical mix from the existing inventory. Similarly, optimum rent distributions could be established and compared with the existing inventory in Tompkins County.

These deficits are identified within the unit types as well as a summary. Within the summary, product that can be provided within the LIHTC program has be identified, as well. The final tab in the workbook is an interactive LIHTC worksheet that can be updated annually from the HUD website accessible via an active link on the worksheet.
