

Rabies Control Program

There were no confirmed cases of rabies in Tompkins County during July of 2015. However, in the beginning of August a bat was confirmed rabies positive by NYS Wadsworth Laboratory (not included in the table below). It resulted in rabies post-exposure prophylaxis for one person who was sleeping in the same room as the bat was found.

A press release was drafted to instruct residents how to capture bats in an effort to prevent unnecessary post-exposure prophylaxis treatment. The press release provides a link to a how-to video released by NYSDOH.

Key Data Overview				
	This Month	YTD 2015	YTD 2014	TOTAL 2014
Bites¹	22	92	86	167
Non Bites²	7	24	34	86
Referrals to Other Counties	1	15	24	43
Submissions to the Rabies Lab	33	126	74	190
Human Post-Ex Treatments	8	33	43	103
Unvaccinated Pets 6-Month Quarantined³	0	2	0	0
Unvaccinated Pets Destroyed⁴	0	1	0	0
Rabid Animals (Laboratory Confirmed)	0	5	4	12

¹"Bites" include all reported bites inflicted by mammals and any other wounds received while saliva is present.

²"Non-bites" include human exposures to saliva of potentially rabid animals. This also includes bats in rooms with sleeping people or young children where the bat was unavailable for testing.

³When an otherwise healthy, unvaccinated pet has contact with a rabid animal, or suspect rabid animal, that pet must be quarantined for 6 months or euthanized. Quarantine must occur in a TCHD-approved facility (such as a kennel) at the owner's expense. If the pet is still healthy at the end of 6 months, the exposure did not result in rabies and the pet is released.

⁴ Pets must be euthanized if they are unvaccinated and have been in contact with a rabid or suspect rabid animal and begin to display signs consistent with rabies. Alternatively, a pet is euthanized if a prescribed 6-month quarantine cannot be performed or the owners elect euthanasia instead of quarantine.
