

## Rabies Control Program

There were four confirmed cases of rabies in Tompkins County during August of 2015. Four bats were captured and submitted to the NYS Wadsworth Laboratory for testing where the presence of rabies was indicated. Fortunately, three of the four rabid bats had no known exposures. However, one of the rabid bats was found in a room where two people were sleeping. Both of these people initiated rabies post-exposure prophylaxis due to potential exposure to the rabid bat.

<b>Key Data Overview</b>				
	<b>This Month</b>	<b>YTD 2015</b>	<b>YTD 2014</b>	<b>TOTAL 2014</b>
<b>Bites<sup>1</sup></b>	30	122	111	167
<b>Non Bites<sup>2</sup></b>	45	69	74	86
<b>Referrals to Other Counties</b>	1	16	27	43
<b>Submissions to the Rabies Lab</b>	68	182	150	190
<b>Human Post-Ex Treatments</b>	47	85	87	103
<b>Unvaccinated Pets 6-Month Quarantined<sup>3</sup></b>	0	2	0	0
<b>Unvaccinated Pets Destroyed<sup>4</sup></b>	0	1	0	0
<b>Rabid Animals (Laboratory Confirmed)</b>	4	9	6	12

<sup>1</sup>"Bites" include all reported bites inflicted by mammals and any other wounds received while saliva is present.

<sup>2</sup>"Non-bites" include human exposures to saliva of potentially rabid animals. This also includes bats in rooms with sleeping people or young children where the bat was unavailable for testing.

<sup>3</sup>When an otherwise healthy, unvaccinated pet has contact with a rabid animal, or suspect rabid animal, that pet must be quarantined for 6 months or euthanized. Quarantine must occur in a TCHD-approved facility (such as a kennel) at the owner's expense. If the pet is still healthy at the end of 6 months, the exposure did not result in rabies and the pet is released.

<sup>4</sup>Pets must be euthanized if they are unvaccinated and have been in contact with a rabid or suspect rabid animal and begin to display signs consistent with rabies. Alternatively, a pet is euthanized if a prescribed 6-month quarantine cannot be performed or the owners elect euthanasia instead of quarantine.
