¹"Bites" and "skin breaks" include all reported bites inflicted by mammals and any other wounds received while saliva is present.

²"Non-bites" include human exposures to saliva of potentially rabid animals where no skin break occurred; potentially rabid animals in contact with pets or livestock; or other potentially rabid animals. This may include bats in rooms with sleeping people or young children where the bat was unavailable for testing.

³When an otherwise healthy, unvaccinated pet has contact with a rabid animal, or suspect rabid animal, that pet must be quarantined for 6 months or euthanized. Quarantine must occur in a TCHD-approved facility (such as a kennel) at the owner's expense. If the pet is still healthy at the end of 6 months, the exposure did not result in rabies and the pet is released.

⁴ Pets must be euthanized if they are unvaccinated and have been in contact with a rabid or suspect rabid animal and begin to display signs consistent with rabies. Alternatively, a pet is euthanized if a prescribed 6-month quarantine cannot be performed or the owners elect euthanasia instead of quarantine.
