

Rabies Control Program

There were no confirmed rabid animals during the month of August, 2013. There continue to be reports of rabid acting animals, either where the animal did not cause an exposure to a human or unvaccinated domestic animal or the suspect animal escaped.

Key Data Overview		
	This Month	YTD
Bites¹	21	156
Non Bites²	17	54
Referrals to Other Counties	4	38
Submissions to the NYS Rabies Lab	65	161
Human Post-Exposure Treatments	20	73
Unvaccinated Pets 6-Month Quarantined³	0	3
Unvaccinated Pets Destroyed⁴	0	0
Rabid Animals (Laboratory Confirmed)	0	6

¹"Bites" include all reported bites inflicted by mammals and any other wounds received while saliva is present.

²"Non-bites" include human exposures to saliva of potentially rabid animals. This also includes bats in rooms with sleeping people or young children where the bat was unavailable for testing.

³When an otherwise healthy, unvaccinated pet has contact with a rabid animal, or suspect rabid animal, that pet must be quarantined for 6 months or euthanized. Quarantine must occur in a TCHD-approved facility (such as a kennel) at the owner's expense. If the pet is still healthy at the end of 6 months, the exposure did not result in rabies and the pet is released.

⁴Pets must be euthanized if they are unvaccinated and have been in contact with a rabid or suspect rabid animal and begin to display signs consistent with rabies. Alternatively, a pet is euthanized if a prescribed 6-month quarantine cannot be performed or the owners elect euthanasia instead of quarantine.
