Cayuga Inlet Hydrilla Treatment
By: Angel Hinickle, Resource Conservation Specialist, CPESC

Treatment of the hydrilla infestation in Cayuga Inlet continues this summer. On June 26th, Aquathol K (endothall) was applied to 100 acres of the Inlet. Within three days of treatment most of the hydrilla plants died and turned to mush. So far, no new regrowth has been discovered. On July 12th, treatment with Sonar Genesis (fluridone liquid) and Sonar One (fluridone pellets) began. These herbicides are being used to prevent plant growth from any 2011 hydrilla tubers that may sprout and emerge from the sediment during the rest of this 2012 growing season. The intention of the fluridone treatment is to prevent any new tubers from being produced in 2012 from new plant growth that could sprout in subsequent years. Sonar Genesis is being applied at a low dose (2-5ppb) through three metered injection units (one at the fish ladder, one on Cascadilla Creek, and one on Six Mile Creek) until October 31. Water quality monitoring is being conducted following each treatment and the results are posted on the “Stop Hydrilla” website. Pre-treatment and post-treatment plant surveys are also being conducted in the Inlet by Aquatic Biologist, Robert Johnson of Racine-Johnson Aquatic Ecologists to determine treatment effectiveness. For more information, please visit stophydrilla.org.

TIRE COLLECTION

One Day Only!

- Saturday, October 13th, 2012
- From 9:00am—1:00pm

Lansing Highway Dept.
10 Town Barn Rd., Lansing, NY

- All car, light truck, and small agricultural tires will be collected for $2.00 each.
- Tractor trailer tires will be collected for $3.00
- All NY State Residents are welcome.
- Please pre-count large quantities of tires!

For more information, please contact the Tompkins County Soil & Water Conservation District at 257-2340.
Farm City Day Celebrates 15th Year With a Return to Sweyolakan Farms

By Debbie Teeter, Agricultural Educator, CCE-Tompkins

Just two years ago the Baker family of Sweyolakan Farms in the Town of Ithaca hosted Tompkins County Farm City Day. This is not the first time the event has been hosted more than once by the same farm, but in the past there has been nearly ten years between visits. Why the rapid return? Because Jamie and Jenny Baker’s youngest daughter, Hannah, was just crowned the 2012 Tompkins County Dairy Princess, and they want to celebrate by once again inviting the public to visit their dairy farm!

This delightful family-oriented event will occur on Saturday, August 18th, from 11:00 a.m. to 4:00 p.m. at 380 Bostwick Road in Ithaca. Spending the day on a dairy farm is an unusual experience for most folks, as there are no dairy farms in the area that regularly host guests. This will be a wonderful opportunity to learn about the many facets of dairying, including care and feeding of livestock at different life stages, barns and other farm structures designed for specific farm needs, land management and crop production, and the types of equipment needed all around the farm.

Jamie Baker, a nutrition consultant for many dairy farms in addition to managing his own farm, once told me the first question he asks a dairy farmer having trouble is, “What’s the most important thing on your farm?” If the answer isn’t “The cows.”, he knows where to start. Farm City Day visitors will see how the Baker family’s operation is based on what they think is best for their cows. For one thing, Baker’s operate a “closed herd”, which means they don’t buy-in any calves or cows; all their cows are born on the farm. This helps maintain herd health by preventing the introduction of illness or disease and has allowed them to grow slowly, thereby avoiding debt. Growing the herd slowly also provided the time needed to construct new buildings, acquire additional water resources, and develop a larger land base to support herd growth.

Visitors from 2010 will be surprised by the new machine and hay storage facility on the farm, as well as the expanded bunk silo. The Bakers have also introduced a new method of calf care. Traditionally, young stock (calves) are housed in individual “hutches” with separate, attached pens. This is a proven method of preventing the exchange of illness and disease between calves, which are, essentially babies – even though they seem pretty big to us. A new approach is to place calves together in a communal area, where they can have free-choice or on-demand feeding, rather than the twice-a-day feeding associated with individual hutches.

The Bakers are finding that by keeping the calves together with on-going access to food, the calves eat 7-8 times per day - less at each feeding, but more overall. As a result, they grow at their own rate, which is faster on average. The Bakers report the calves remain healthy and they benefit from the interaction.

Farm City Day will offer in-depth information on many of Sweyolakan Farm’s practices, often from the farm’s consultants and agencies and businesses they work with. You’ll also be able to meet three generations of the Baker family, all of whom are involved with the farm in some way. Plan to spend the day learning about the farm: from exploring the different barns, milk house and other farm structures to taking a wagon ride through the farm fields. There’s a lot to see and do, since the Bakers have a herd of just under 200 cows and work over 1000 acres.

So, why not, take a drive up Bostwick Road between Seven Mile Drive and Sheffield Road in Ithaca On Saturday, August 18th? You’ll have the chance to appreciate close-up a view many area residents have enjoyed for years from the other side of the valley. The Baker family, a terrific example of the excellent stewardship farmers provide for the land and animals, invites visitors to come on out and experience the farm first-hand at this year’s Farm City Day!

The Tompkins County Soil & Water Conservation District recently participated in the “Celebrate The Lake” event held on July 17th from 4-7pm at the Farmers Market in Ithaca. This was the first time for this event, and it was very successful with plenty of informational booths, activities, kayaking, paddleboarding, music, food, and beverages. The event was organized and sponsored by the Finger Lakes Land Trust, and many other organizations.
DISTRICT SERVICES
• Hydro-seeder (fee) • No-till Drill (fee for rental) • Broadcast Seeder (loaned out for free) • Soil Sampling (fee) • Pond Site Evaluations (fee) • Streambank Erosion, Technical Assistance • Drainage Problems, Technical Assistance • Comprehensive Nutrient Management Plans • Grazing Plans • Pasture Improvement • Educational Presentations and Resources • Ag-Plastics Baler

The Tompkins County Soil & Water Conservation District and the Natural Resources Conservation Service prohibit discrimination in all their programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status.
Seeing first hand day after day how hard you all work helped push me to try and model that type of character and behavior.

I can honestly say it has been the utmost highest privilege, honor, and blessing to be able to work beside you farmers. You are truly the backbone of this great country and heroes in my eyes! I honestly cannot thank you all enough for all that you have done for me and taught me. If there is anything that I can ever do for you please don't hesitate one bit to call (315-963-0779) or email (josh.hornesky@ny.usda.gov) me. I hope to keep in touch with many of you so never hesitate to call or write and say hello!

Benjamin Bonk is the new summer intern at the Ithaca NRCS Field Office as part of a cooperative agreement between the USDA-NRCS in New York and SUNY Cobleskill. Only a select number of field offices will be hosting student interns this summer and the Ithaca office is proud to welcome him. Ben will graduate from Cobleskill in December 2012 with a Bachelor’s degree in Plant Science with an emphasis within environmental studies. Ben’s interest is in soil and water conservation, planning to control soil erosion and improve water quality. During Ben’s tenure, he will be calculating erosion from field and map measurements with RUSLE2. He will also help in developing plans using GIS and measuring the location and amount of installed practices in the plans with GPS.

### 2012 Fall Barley Straw Order Form

The Tompkins County Soil & Water Conservation District will be accepting barley straw orders now through October 12th. Pick up date will be on **Friday, October 19th**, from **8:00am-4:00pm** at 1771 Hanshaw Rd., Ithaca, NY. Price is **$9.72** per bale. Recommended 5 bales per surface acre. Payment is due with the order form, and checks can be made out to TCSWCD, and sent to 1771 Hanshaw Rd., Ithaca, NY 14850. - $40 delivery charge within a 30 mile radius.

2012 Fall Pond Stocking Order Form

Order By: Delivery Date:

PERCH
October 10 October 20 at 11:30 AM

CRAPPIE
October 10 October 20 at 11:30 AM

FATHEAD MINNOWS
October 10 October 20 at 11:30 AM

Instructions for Fish Pick-Up

- A Pond Stocking License application should be obtained from NYS DEC or Tompkins County SWCD, and must be returned to DEC before placing fish into your pond.
- Deliveries: will take place at Tompkins County SWCD located at 1771 Hanshaw Road, Ithaca. Please be prompt. The hatchery truck will not wait and we cannot hold your fish.
- Containers: use clean milk cans or garbage cans with plastic liners and lids. Each container must be large enough to hold 15 to 20 gallons of water.

Water: BRING WATER FROM YOUR POND. Do not use chlorinated water to transport your fish.

Tompkins County Soil & Water Conservation District is NOT responsible for the loss of fish during transport by owner, or once the fish are in the pond.
